

Once a Docker Enterprise Edition subscription has been purchased and activated, you can access it from the **My Content** page of the Docker Store. Navigate to the [Docker Store \(https://store.docker.com\)](https://store.docker.com) and log in with the Docker ID the subscription was associated with.

Note: If the subscription is associated with an organization, log in with a user account that is a member of the "Owners" team of that organization.

Once logged in, click the dropdown by your username in the upper right corner, and click the **My Content** link.

[GET DOCKER](#)

On the **My Content** page you will notice any active subscriptions that are associated with your Docker ID. If your subscription is associated with an organization, you will need to select the organization from the **Account** drop down menu in the top right corner of the **My Content** page.

Note: The Account dropdown menu includes any organizations of which your user account is a member of the "Owners" team. If you have any Docker EE subscriptions associated with any of your organizations, they can be accessed by selecting the organization via this **Account** dropdown menu.

Docker Enterprise Edition

NFR Advanced | 5 Linux (x86-64) Nodes
Started November 7, 2017 | Ends November 7, 2018 Active [Setup](#) [Actions](#)

Advanced Business Day | 25 Windows (x86-64) Nodes, 10 Linux (x86-64) Nodes
Started October 31, 2017 | Ends October 31, 2018 Active [Setup](#) [Actions](#)

Advanced Business Day | 10 Windows (x86-64) Nodes
Started October 6, 2017 | Ends October 6, 2018 Active [Setup](#) [Actions](#)

Click the setup button on your subscription to be redirected to the setup instructions page where you are provided with Docker EE Engine installation instructions, a link to download your license key, a link to download the CVE Vulnerability Database for DTR (EE Advanced Subscriptions), and the Docker EE repository URL.

Note: Docker Enterprise Edition Basic subscriptions are "engine only" and don't have a license key or the CVE Vulnerability Database. Docker Enterprise Edition Standard subscriptions don't include the CVE Vulnerability Database.

Docker EE - Tue Oct 31 2017

Get Docker EE

Docker EE on CentOS

1. Store your EE repository URL in `/etc/yum/vars/dockerurl`. Replace `<DOCKER-EE-URL>` with the URL you noted down in the [prerequisites](#).

```
$ sudo sh -c 'echo "<DOCKER-EE-URL>/centos" > /etc/yum/vars/dockerurl'
```

2. Go to <https://docs.docker.com/engine/installation/linux/centos/> for detailed install instructions for Docker EE on CentOS. Be sure to use your custom Docker EE repository URL where a repository is mentioned.

Docker EE on Oracle Linux

1. Store your EE repository URL in `/etc/yum/vars/dockerurl`. Replace `<DOCKER-EE-URL>` with the URL you noted down in the [prerequisites](#).

```
$ sudo sh -c 'echo "<DOCKER-EE-URL>/oraclelinux" > /etc/yum/vars/dockerurl'
```

2. Go to <https://docs.docker.com/engine/installation/linux/oracle/> for detailed install instructions
