

You can create Organizations in the Docker Hub to share repositories with coworkers and collaborators. Members of an organization can see only the teams to which they belong and their memberships. Members of the Owners team can see and edit all of the teams and all of the team membership lists. Docker Hub users outside an organization cannot see the Organizations or teams another user belongs to. For more information on Docker organizations, please visit the following link:

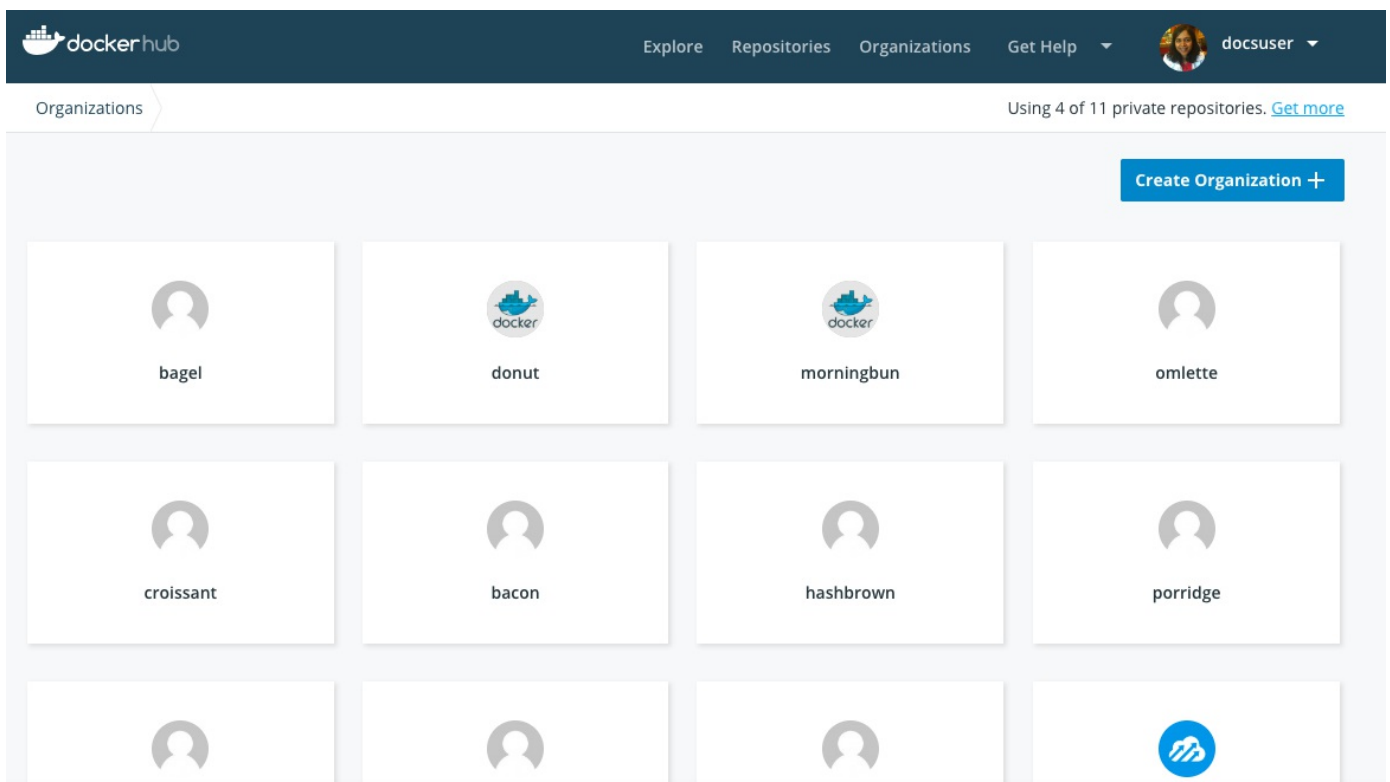

<https://docs.docker.com/docker-hub/orgs/> (<https://docs.docker.com/docker-hub/orgs/>)

Each organization has an Owners team which contains the users who manage the organization's settings. If you created the organization, you are automatically added to the Owners team. You can add new users to the Owners team and then leave the team if you want to transfer ownership. **There must always be at least one member of the Owners team.**

Note: You cannot change the Owners team permission settings. Only add users to the Owners team who you are comfortable granting this level of access.

The following is a visual step-by-step guide on adding a team member to the Owners team of your organization using the Docker Hub interface:

1. Log into [Docker Hub \(https://hub.docker.com/\)](https://hub.docker.com/).
2. Navigate to the [Organizations & Teams Page \(https://hub.docker.com/organizations/\)](https://hub.docker.com/organizations/).
3. Select the organization you would like to edit.

4. Click the **Teams** Tab and navigate to the **Teams** Page of the organization.
5. Click the owners team.

The screenshot shows the Docker Hub interface for an organization named 'bagel'. At the top, there are navigation links for 'Explore', 'Repositories', 'Organizations', and 'Get Help'. The user 'docsuser' is logged in. The breadcrumb trail shows 'Organizations > bagel'. A 'Create Team +' button is visible in the top right. Below the header, a table lists the teams within the organization:

TEAM NAME	DESCRIPTION	MEMBERS	TOTAL
owners	This is a special team		0
developers	Developer team	ma na ba	3
other		ma dj ra ju ca na jm da ti ma ma fe te ro +4	18
bagelbot	bagelbot's home. No one else should ...	ba	1
design	description		0

6. Enter the Docker ID or email address in the **Add new member by username or email** box.
7. Click the "+" to add the member to the team.

The screenshot shows the Docker Hub interface for the 'bagel' organization, specifically the 'owners' team page. The breadcrumb trail is 'Organizations > bagel > owners'. The 'Users' tab is selected. A modal dialog box titled 'Add user' is open, prompting the user to 'Invite using their Docker ID or email address'. The input field contains the text 'newadditiontoteam'. There are 'Cancel' and 'Add' buttons at the bottom of the dialog. In the background, a list of users is visible, including 'docsuser' and 'bagelbot'.

8. You will now notice the new member has been added to the Owners Team of your organization. This member will now be able to configure and edit all of the teams and team membership lists.
